1. Overview

ARC Informatique is aware of potential security vulnerabilities affecting PcVue.

PcVue relies on a number of third-party libraries and dependencies, some of which may present vulnerabilities that could impact the security of our products.

This bulletin lists the vulnerable libraries updated in the PcVue Maintenance Release 16.3.6.

2. Affected libraries and components

Library/dependency	Affected components	Description
expat	ICCP add-on	Bumped from version 2.7.4 to 2.7.5 It notably fixes CVE-2026-32776 , CVE62026-32777 and CVE-2026-32778 .

3. Impact

The impact on a particular system depends on many factors. According to the vulnerabilities described in this bulletin, users are responsible for assessing the potential impact of the identified vulnerabilities on their specific environment.

4. Immediate risk mitigation

Failure to implement the recommended updates or actions, including without limitation, recommended patches or remediations, shall be at user's sole risk and expense. The responsible entity shall take all appropriate actions to secure and safeguard its systems and data. ARC Informatique shall have no liability for failure to implement the recommended updates or actions or failure to secure and safeguard systems and data.

4.1 Harden the configuration

Who should apply this recommendation: All users

To reduce the risk of exploitation, ARC Informatique strongly recommends implementing the following defensive measures:

- Minimize network exposure for all control system devices and/or systems, and ensure they are not accessible from the insecure networks.
- Place control system networks and remote devices behind firewalls and isolate them from business networks.
- When remote access is required, use secure methods, such as Virtual Private Networks (VPNs), recognizing VPNs may have vulnerabilities and should be updated to the most current version available. Also recognize VPN is only as secure as its connected devices.

4.2 Update PcVue

Who should apply this recommendation: All users running affected components.

Apply the corrective update by installing PcVue Maintenance Release 16.3.6 or later

To verify that the patch is applied correctly, you must check that the *File version* property of the file `./bin/sv32.exe` matches release 16.3.6 (16.3.6901.3274) or later, and ensure that any earlier release is no longer used.
