Introduction

RefVue is an internal tool for storing, classing, researching and updating our PcVue project references. It also allows the automatic generation of presentation slides from references selected by the user.

This tool is based on cooperation, and it needs the investment of each one to improve its content day by day.

The presentations have uniquely an informative purpose. The totality of the information are furnished by ARC Informatique, and beside the fact that we try to keep them up-to-date, there is no insurance implicitly or explicitly guaranteeing their exhaustiveness, accuracy, and reliability.

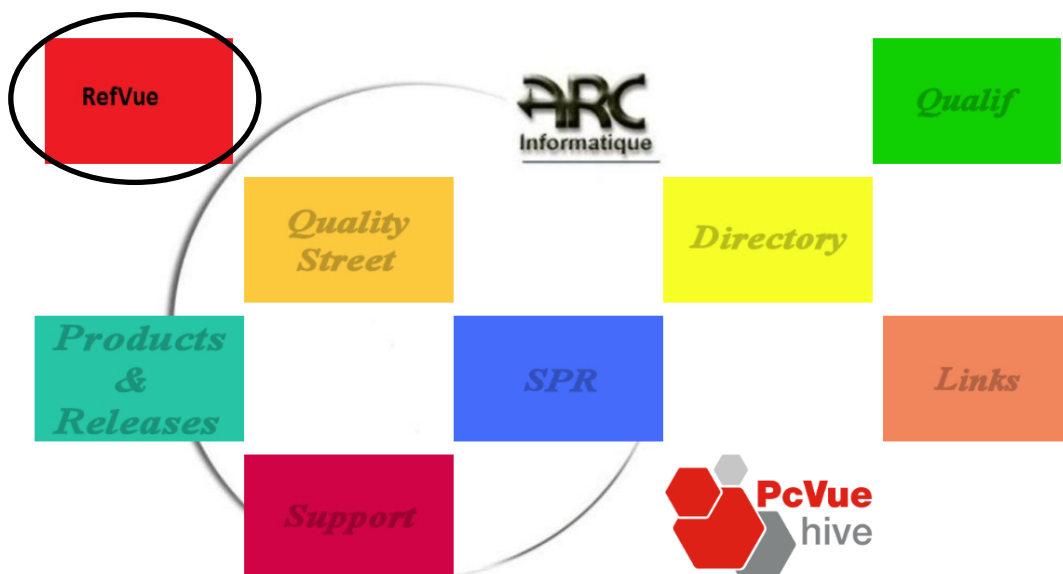

Those information must be treated as confidential. You can download them on your PC and use them for your client presentations, but they cannot be in anyway copied or redistributed.

The following manual will detail the complete utilization of RefVue, in 4 parts parts:

- 1- Identification and access to RefVue
- 2- Adding and Updating a reference
- 3- Researching a reference and generating a slide or excel
- 4- Modifying a technical word in the Glossary page

2 – Identification & access to RefVue

RefVue can be found on <http://intra.arcinfo.local/refvue/> address. It is reachable from any site having an access to the ARC intranet (in the agencies, or through the VPN stormshield implemented by the IT Service)

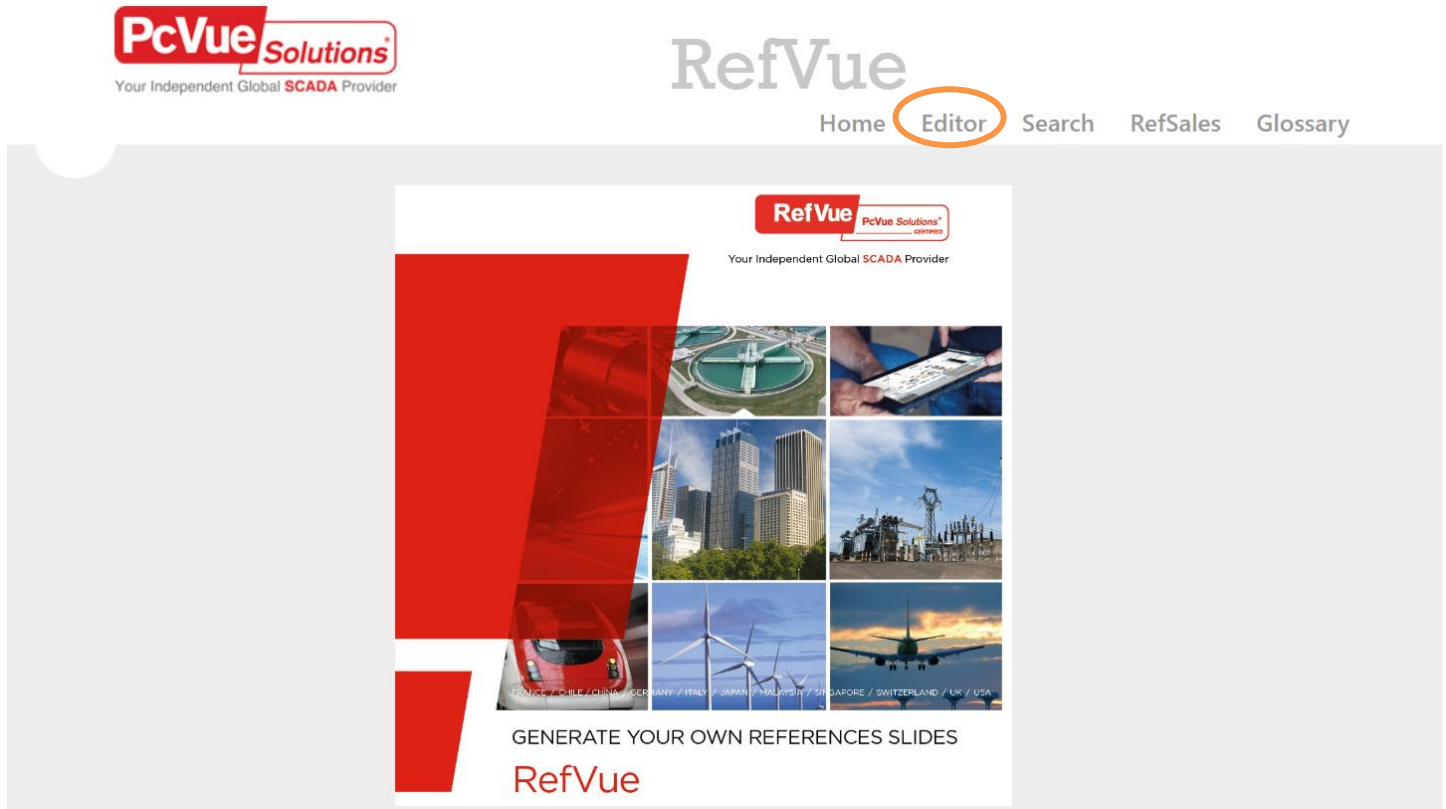

If you don't have it please contact it@arcinfo.com to get credentials.

You should now be able to connect to our RefVue webpage.

3 – Adding & Updating a reference

On the homepage, you can now go to the editor clicking on the “Editor” category, on the menu bar.

3.1 Adding a reference

Now you are in the **editor**, if you want to **add** a reference, click on the **button** “Add Reference”, located on the upper-left corner of the webpage.

WARNING: RefVue distinguishes itself by its utilization in several languages, which you can choose by modifying the **item** on the upper-right corner of the page.

It is essential to fill the reference in the selected language.

Select your language

English

Please select a language **before adding** a new Reference in this language.

1 2 3 4 5 6 7 8 9 10 ...

You can filter the references by **seller** or **status**.

Once you have done this operation, a window appears on the webpage as following:

Add Reference

You are creating the Reference in English		Project
Application Type BMS		Description
Line Of Business Automotive		
SI		
End User		
Authorization Yes Seller enza		Number Of Tags
Date  3/31/2023		Number Of PcVue Stations
Region AFRICA + MIDDLE EAST		Specific Function
Country ALL Click to Add a new country		Communication Type
City ALL Click to Add a new city		Version ALL Click to Add a new version
Zip Code 00000		
Status Draft		
Image 		
Upload New Image Choisir un fichier Aucun fichier sélectionné		

3.1.1 Input

You can then start to enter the information related to your reference in the language written in Red.

Be careful to select the appropriate drop-down menus, concerning the **application type**, the **line of business** and the **region**.

The **authorization of exploitation** of the reference being automatically on the “Yes” position, please verify its exact status.

The drop-down menu “**Status**” concerns the exploitability level of the reference. Select the default entry “**Draft**” if you consider the reference **incomplete** or **needing modifications**.

In contrast, if you consider the information complete and exploitable, please select the “Release” position.

It is sometimes useful to find a reference, or a group of references related to a particular region. Please do not forget to fill the “Zip Code” section, whenever it is possible. Note that only the two first numbers of the Zip Code will be taken in account during research.

The date is automatically selected on the day of the addition of the reference. You can modify it to select the day of the acknowledgment of receipt.

Concerning the Country, check if it exists in the list. If it not, click on the button: **Click to Add a new country**. A TextBox will appear, you can in this case **insert a new country** then click on **Click to Add Country on list**. After that you can choose your country in the list. Same process to select a City and Version.

Add Reference

You are creating the Reference in Application Type English Application Type: BMS Line Of Business: Automotive SI: End User: Authorization: Yes Seller: ENZA Date: 7/29/2022 Region: AFRICA + MIDDLE EAST Country: ALL Click to Add a new country New Country: Click to Add country on list City: ALL Click to Add a new city New City: Click to Add city on list Zip Code: 00000 Status: Draft Image:  Upload New Image: Choose File No file chosen	Project: 48 characters Description: 400 characters Number Of Tags: 120 characters Number Of PcVue Stations: 120 characters Specific Function: 120 characters Communication Type: 120 characters
--	---

⚠ Be careful when entering a new country/city/version in the spelling of the word because you cannot change it after adding it.

To ensure the adaptability of the entered information with the slide format, the totality of the boxes is submitted to different limits of characters, as indicated **below**:

[Click here to see how complete a reference.](#)

RefVue only exploits the content of the boxes during the slide generation. Please be careful to fill the categories “**Number of tags**” and “**Number of PcVue stations**” following the example: “10 000 **tags**” and “4 **PcVue stations**”.

Indeed, if you write only the numbers, the only information appearing on the slide will be “10 000” and “4”, which does not bring many relevancy to the slide.

3.1.2 Adding Pictures

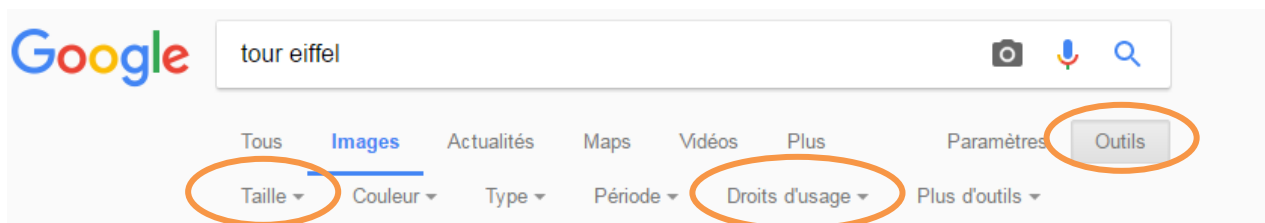

Adding pictures is an essential factor to the efficiency of RefVue. Indeed, without any ‘Client’ image, every slide will be automatically generated with a default image related to each type of PcVue application.

Adding a picture related to the project is therefore an addition to the ergonomics and the relevancy of the slide.

First, the **volume** of the images. Every slide generated by RefVue has a certain weight. A non-compressed picture, or with a high resolution could cause the creation of a quite large PowerPoint file. We recommend to use pictures with a resolution between 800x600 and 1440x1100, or more simply, of a size inferior to 1 Mo.

The copyright. It is essential to select images free of copyright, furnished by the client himself with his **explicit agreement**, or if that is not possible, obtained on the web (Common creatives).

You can restrict the research field in **Google Images** to obtain images respecting those two criterions by clicking on the “**Tools**” section, selecting the “**Size**”, and in the section “**Copyright**”, the categories “Re-utilization and authorized modification” and “Authorized re-utilization”.

Back on RefVue, to add the image on the reference, click on “**Choose a file**” in the “**Upload a file**” section, select your picture in the relevant Windows directory, and load the file.

On the next page, find the example of a reference fully completed.

1 2 3 4 5 6 7 8 9 10 ...

The references are chronologically classed, according to their creation date (without taking in account the hour).

3.2 Updating a reference

The process is strictly identical when you **update** a reference.

Click on the “**Edit**” button of your reference, as showed above, do the necessary modifications, and save your modifications by clicking on “**Update**”.

Delete button is only available for Admin users.

4 – Searching a reference and generating a slide

4.1 Research

RefVue allows you to do a refined search of references in the “**Search**” section. Choose the Search Language for searching your reference in the Language chosen.

Be careful, all references are available in French, English, Italian, Spanish, Chinese and German and maybe potentially wrong because of the traductor. For other languages translation will be done when generating PPTX in the desired language.

RefVue

Home Editor **Search** RefSales Glossary

Once you are in the “**Search**” section, you can precise your research thanks to the different roll-down menus at your disposition.

You can fill the category “**Zip Code**” with the two first numbers of the desired zip code.

WARNING: You have to tick the boxes “**Include Draft**” and “**Include Unauthorized**” to access all references.

4.1.1 Keywords

You can also restrict your research even more by using keywords. Operations are possible through the following commands:

- AND: example “BACnet AND Annecy”
- OR: example “BACnet OR ModBus”

4.1.2 Visualization and editing

Once your research is done, you can obtain one or several results, their number being indicated as **below**:

Search References

Search Language: English

Edit References

Select the language of the Generation: English

Choose the Generation Type:

Excel **PowerPoint**

You can then visualize the integrality of the references found by clicking on “**Edit References**”, and by scrolling through them with the arrows on the downside of the window. You can thus effectuate a correction, before generating the slides.

Note that a number of references superior to 50 will imply the generation of a relatively heavy PowerPoint file, containing all the selected references.

You can directly **Update** references of your choice in the list from your research.

If you want to **Delete** references from your research, click on the **Cross** and it will not be inserted for the generation.

Click on the **Arrows** to overview the reference list filtered by your research.

If you want to change a field on the reference before the generation, change it and click on **Update Content**.

After that, you can generate **Excel** or **PowerPoint** in the **Language** of your choice. Then close the windows by clicking on **Close**.

5 – Change technical words in Glossary page

Because of the automatic translation, it's possible that some words have been mistranslated.

You can choose between 2 tabs: **Line of Business** and **Market**.

The left field show you the English words which are correct.

Choose **your Language** (Brazil in this example) to verify if all words correspond to the English one.

If it's not the case, **tick the box** and your correct translation in the **TextBox**. Then **click on Validate**, it will refresh the page and add your word to RefVue.

6 - How to fill a reference

6.1 Content for a reference (do/don't)

BMS - Mall

TITLE:
Site or the customer
Project name

Meyrin - Switzerland

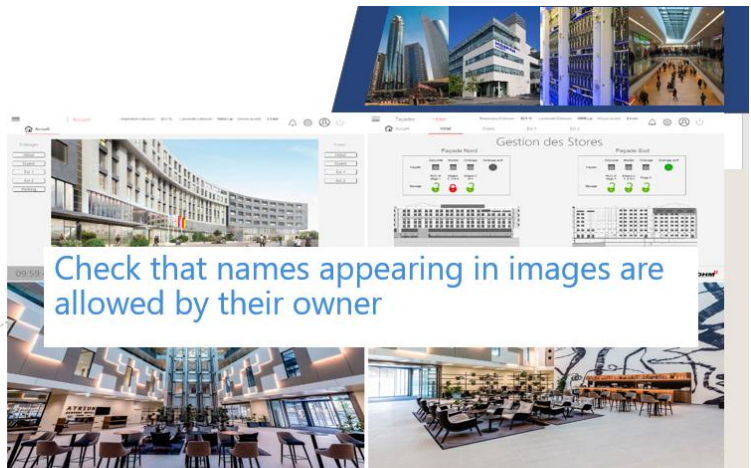

Project description

Instead of:

- ⇒ Describe the site activity with too much details
- ⇒ Not explain what PcVue does, how and for what benefits
- ⇒ Give too many technical details with no benefits

Prefer

- ⇒ Describe briefly what is the site activity and the context
- ⇒ Explain:
 - ⇒ What PcVue does?
 - ⇒ How is it done?
 - ⇒ What are the benefits for the customer?
- ⇒ Mention relevant figures if possible so the reader can compare

Check that names appearing in images are allowed by their owner

- Technical properties
- Indicate any relevant technical points that can demonstrate the benefits for the specific project

Ref Id : 2126

All marks or names of products mentioned in this document are the property of their respective owners.

6.2 Example

6.2.1 Instead of

BMS - MALL

Redondancy

BMS Monitoring of lighting and blinds What is the name of the site or customer?

Meyrin - Switzerland

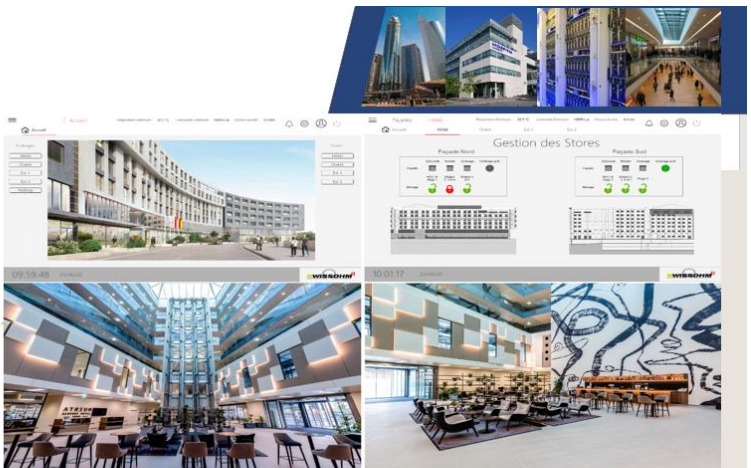

PcVue retrieves information from KNX buses via Wago PLCs.

This centralized management via Wago automations makes it possible to manage the entire infrastructure to control the blinds and lighting by geographic groups (manual, automatic and calendar actions).

What are the benefits?

What is the area covered?

- 1000 tags
- 1 Station
- Smart Generator Wago
- Utilisation des bibliothèques intégrées
- Modbus TCP/IP

Ref Id : 2126

All marks or names of products mentioned in this document are the property of their respective owners.

6.2.2 Prefer

BMS - MALL

Mall of "Meyrin 2" Supervision of the lighting and blinds

Meyrin - Switzerland

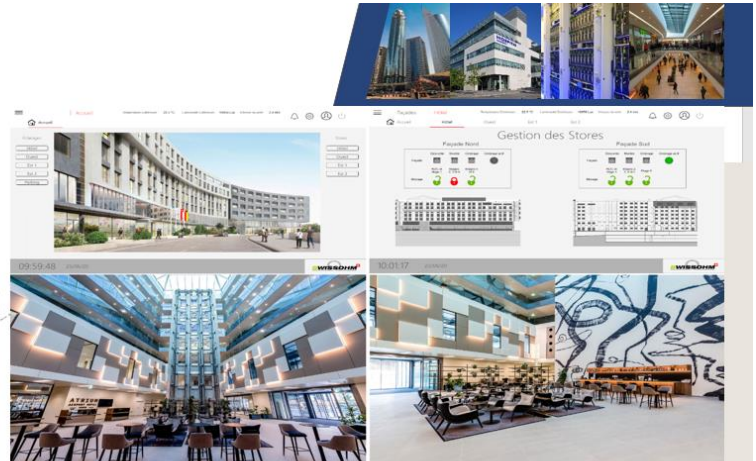

Mall "Meyrin 2" is the 2nd largest mall of Switzerland with an area of 120 000m²

PcVue monitors and controls the blinds and lighting by geographic groups (manual, automatic and calendar actions).

All data are gathered in a centralized manner from KNX buses via Wago PLCs

The system allows the maintenance teams to manage the entire infrastructure very efficiently and ensure a high level of confort for occupants
